TWEEDIA

Oxypetalum coeruleum

Common name:

Tweedia

Latin name:

Oxypetalum coeruleum

Variety Names:

Sky Blue, Pure White

Color:

Light blue, White

Vase life:

10-12 days

Stem length:

50 cm and 60 cm

Origin:

Japan

Year launched:

2023

SKY BLUE

PURE WHITE

CARE & HANDLING

It is important to keep tweedia separate from other flowers during the hydration process, as the stems exude a milky sap when cut that will clog the stems of other flowers. To start processing, trim the stems at least 1" and remove any foliage that may remain below the water line. Place the stems in a separate bucket of water and hydrating solution overnight in a cooler (33 °F) to remove the sap. Before arranging, trim the stems again and let them hydrate in a separate bucket for one hour to drain any remaining sap. You may then combine tweedia with other flowers.

WINTER BELLS

Helleborus orientalis

Common name:

Latin name:

Variety Name:

Color:

Vase life:

Stem length:

Origin:

Year launched:

Winter Bells, Lenten Rose

Helleborus orientalis

Magnificent Bells™

White, Green

10-14 days

40 cm

Holland

2025

CARE & HANDLING

Please process as soon as they arrive. Trim the stems 1-2", place the stems in hydrating solution, and store them in a cooler for 24 hours before use. When you are ready to use them, recut the stems by 1", remove any foliage that may remain below the water line, and place them in the vase with flower preservative.
